

Woodside

ENVIRO WORRIERS!

Woodside helps restore native bushland at Lake Claremont

In the heart of the Western Suburbs, on a site that was a golf course only 10 years ago, lies Lake Claremont a biodiversity hotspot.

In the midst of winter, the Geotechnical Operations team was lucky to get a morning of sun while volunteering with Friend of Lake Claremont (FOLC) a community organisation established and run by local residents.

Members of FOLC began the day by providing the team with a bounty of knowledge involving the ecosystems and flora and fauna of Lake Claremont. Following this the team got down to business splitting into 2 groups- weeders and clearers.

The clearers were tasked with the tiresome job of removing dead branches and leaves from the understory of the bush land as a part of FOLC's fire prevents strategy. For a bit of fun they bought along one of Woodsides drones to get some aerial shots of the team in action.

Some positive outcomes from volunteering with FOLC:

Engaging with the community

Outdoor exercise and fun with colleagues

Learning about the biodiversity of Lake Claremont
